

## Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is a device made out of top quality materials intended to be able to withstand the most difficult operations and work environments. This piece of equipment can enable the person driving to work the blades hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the entire load or the arms so as to facilitate much more exact lifting and placement in a faster and much more effective manner.

The blade pocket is quite unique and can enable the person operating it to securely swing the forks into position without any worry of damaging the positioning cylinders. This can allow the operator the choice to be able to execute simultaneous or independent fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be converted into fork positioners on available units.
