The U.S. forklift division situated in Cleveland has a expert team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Originally the home-based forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled forklifts as part of a home-based machinery expansion venture. Product sales of these goods were originally targeted to state-run companies, large scale organizations, and the military. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Home-based forklift business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's advanced technological enhancements combined with sales success placed them in a position of significant growth of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the highly competitive North American materials handling industry. This project proved highly profitable for Daewoo and their lift truck sales expanded greatly. In 1984, the company completed construction of a new facility to help in manufacturing high end value-added goods for export. In 1993, the corporation had a international sales network and started exporting designs they had established through in-house expertise, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into international marketplaces.
